

CHOLESTEROL BUSTER™

DISCOVER A SAFE, NATURAL WAY TO HELP YOUR BODY
MAINTAIN A HEALTHY CHOLESTEROL

optimize

health

Not all cholesterol is the same. There is oxidized and non-oxidized cholesterol. If cholesterol becomes oxidized, it gets sticky and is more prone to forming plaque on the walls of arteries. Cholesterol Buster prevents this 'stickiness' and much more.

THE STORY:

To be safe from most cardiovascular problems, total cholesterol in the blood should be less than 200 mg/dl. A range of 200-239 is borderline. But 240 and above is too high. There are two types of cholesterol: HDL and LDL. HDL Cholesterol is 'good' because it helps remove cholesterol from the blood. Levels above 40 mg/dl are considered healthy. LDL cholesterol is 'bad' because it builds up in the arteries. Levels below 100 mg/dl are optimal for cardiovascular health. Use Cholesterol Buster to help your body get where it needs to be.

NUTRITION FOR THE BODY:

It's no surprise that our food choices can create

dangerously high levels of cholesterol. Additional fiber and high quality food can significantly help maintain healthy cholesterol levels. Safe, natural, cholesterol-controlling supplements offer significant help. Take action now.

THE SCIENCE:

Many people don't know that their liver manufactures over 80% of their cholesterol. It makes sense to find something that inhibits the enzyme responsible for producing excessive cholesterol. Statin drugs, with all their disagreeable side effects, do this; but they also block an important molecule called CoQ10, causing unpleasant side effects and long-term consequences. Cholesterol Buster inhibits the enzyme that produces cholesterol naturally without limiting production of CoQ10. In clinical studies, his product has shown to significantly reduce total cholesterol, LDL cholesterol and triglycerides while lowering the bad and raising the good for a healthier ratio.

CHOLESTEROL BUSTER™

Supplement Facts

Serving Size: 2 V-caps	Amount per serving
Plant Sterols (Phytosterold)	400 mg
Sytrinol™ <small>(proprietary blend of polymethoxylated flavones and tocotrienols from citrus and palm fruit)</small>	150 mg
Standardized Pomegranate Extract (Fruit) <small>(Standardized to 40% ellagic acid)</small>	50 mg

Suggested Use: Adults take 2 V-caps daily with a meal or as directed by a physician.

"I am a cancer survivor. When I was diagnosed, I was given only three to six months to live. It has been 18 ½ years since the diagnosis. I have always gone back to see my doctor at the Huntsman Cancer in SLC, UT, but insurance and distance makes that difficult since we moved to Arizona. I went to an oncologist here in Arizona last fall, and he ran all the tests that cancer patients have like blood work, bone density, etc. Then 2 weeks ago it was time to have blood work done with my primary doctor. I had forgotten that the next day I had scheduled to have blood work done with my oncologist. Last

week I got a call from my primary doctor's office stating that my cholesterol was too high. I was discouraged, to say the least. I scheduled to see her. Meanwhile I went in to see my oncologist. He came into the room and just said "Do you really recognize what a miracle you are? You have no idea." After the routine checkup, he told me to come to his office. We went over everything and then I said, "Talk to me about my blood work." He looked at the chart and then looked up at me. He said that my cholesterol was 217, a little high. I asked him to look back and see what it was last fall. Wow, my cholesterol

was over 400. He asked me, "Would you mind telling me what you are doing?" I chuckled and replied, "No, I'm not quite ready to let you in on that." I inherited high cholesterol from my family tree. The doctor told me to try to fix it with exercise and diet. I didn't change my diet and exercise much, but I did take K48-PLUS™, SOL-RD™ and Cholesterol Buster. He stated that my Vitamin D3 levels were perfect for a cancer patient. You can't believe how much mileage we're getting as we recruit by simply telling my story."
